In the Claims

Rewrite claims 2-4, 13 and 20-26, as follows:

2. (twice amended) A process for the preparation of a transgenic plant, which process comprises:

(i) transforming a plant cell with a chimaeric gene comprising (a) a promoter operably linked to [and] (b) a [deoxynucleic] deoxyribonucleic acid fragment comprising a coding sequence which encodes for an enzyme selected from the group consisting of phosphofructokinase, pyruvate kinase, acid invertase, starch synthase, adenine diphosphoglucose pyrophosphorylase, sucrose synthase, 6-phospho-fructokinase (pyrophosphate) and sucrose phosphate synthetase; and

(ii) regenerating a plant from the transformed cell.

D 1
3. (twice amended) A process according to claim 2, wherein the fragment [coding sequence (b)] is from a microbial gene.

D 2
4. (twice amended) A process according to claim 2, wherein the fragment [coding sequence (b)] is from a bacterial gene.

D 2
13. (twice amended) A transgenic plant which harbors in its cells a chimaeric gene which comprises;
(a) a promoter operably linked to
(b) a deoxyribonucleic [deoxyribonucleic] acid fragment comprising a coding sequence which encodes an enzyme selected from the group consisting of phosphofructokinase, pyruvate kinase, acid invertase, starch synthase, 6-phosphofructokinase (pyrophosphate), adenine diphosphoglucose pyrophosphorylase, sucrose synthase and sucrose phosphate synthetase; and which is capable of being expressed in the cells of the plant.

D 3
20. (amended) A transgenic potato plant which harbors in its cells a chimaeric gene, which comprises;
(a) a promoter operably linked to
(b) a deoxyribonucleic [deoxyribonucleic] acid fragment comprising a coding sequence which encodes

D 3
adenine diphosphoglucose pyrophosphorylase; said gene being capable of expression in the cells of the transgenic potato plant.

21. (amended) A transgenic potato plant according to claim 20 wherein the [coding sequence] fragment also encodes for a second enzyme.

22. (amended) A process according to claim 2, wherein the fragment [coding sequence] encodes for 2 or more of the enzymes selected.

W 4
23. (amended) [a] A chimaeric gene according to claim 9 wherein the fragment [coding sequence] encodes for 2 or more of the enzymes selected.

24. (amended) A transgenic plant according to claim 13 wherein the fragment [coding sequence] encodes for 2 or more of the enzymes selected.

25. (amended) A transgenic plant which harbors in its cells a chimaeric gene, which comprises:
(a) a promoter operably linked to
(b) a deoxyribonucleic acid fragment comprising a coding sequence which encodes for phosphofructokinase and a second enzyme selected from the group consisting of

W4

pyruvate kinase, acid invertase, starch synthase, adenine diphosphoglucomerase pyrophosphorylase, sucrose synthase, 6-phosphofructokinase (pyrophosphate) and sucrose phosphate synthetase;

said gene being capable of being expressed in the cells of the transgenic plant [A transgenic plant according to claim 24 wherein the coding sequence also encodes for the enzyme phosphofructokinase].

W5

26. (amended) A transgenic potato plant which harbors in its cells a chimaeric gene, which comprises;

(a) a promoter operably linked to

(b) a deoxyribonucleic acid fragment comprising a coding sequence which encodes adenine diphosphoglucomerase pyrophosphorylase and a second enzyme selected from the group consisting of phosphofructokinase, pyruvate kinase, acid invertase, starch synthase, sucrose synthase, 6-phosphofructokinase (pyrophosphate) and sucrose phosphate synthetase; said gene being capable of being expressed in the cells of the transgenic potato plant [according to claim 24 wherein one of the enzymes selected is adenine diphosphoglucomerase pyrophosphorylase].

Enter new claims 27-30 as follows:

27. A transgenic potato plant which harbors in its cells a chimaeric gene, which comprises;

(a) a promoter operably linked to

(b) a deoxyribonucleic acid fragment comprising a coding sequence which encodes for acid invertase and a second enzyme, said gene being capable of expression in the cells of the transgenic potato plant.

28. A transgenic potato plant which harbors in its cells a chimaeric gene, which comprises;

(a) a promoter operably linked to

(b) a deoxyribonucleic acid fragment comprising a coding sequence which encodes for sucrose synthase, said gene being capable of expression in the cells of the transgenic potato plant.

29. A transgenic plant which harbors in its cells a chimaeric gene, which comprises;

(a) a promoter operably linked to

(b) a deoxyribonucleic acid fragment comprising a coding sequence which encodes an enzyme selected from the group consisting of phosphofructokinase, pyruvate kinase, acid invertase, starch synthase, adenine diphosphoglucose pyrophosphorylase, sucrose synthase, 6-phosphofructokinase (pyrophosphate) and sucrose phosphate synthetase;
